

Parlay Xtream

Save money and avoid unexpected bills for mobile calls from abroad!

Cut down on your bills for mobile calls

- Save up to 50% on your telephone calls
- Your expenses will be recovered shortly!
- Very easy to use

Companies with employees travelling abroad often receive large telephone bills for mobile calls made from abroad. These bills can easily be reduced to a minimum and you can still use your mobile phone as usual. Install a Parlay Xtream unit in your company.

The Parlay Xtream unit will automatically convert expensive calls from the mobile phone into much cheaper calls made to the mobile phone.

Save up to 50%

You can easily save up to 50% on mobile calls made from abroad by using the Parlay Xtream:

1. Make a call to the company's call back number – the call will automatically be interrupted.
2. The Parlay Xtream auto-matically makes an immediate call to the mobile phone.
3. Answer the call and you now dial the requested number. The call can now be made at a low price.

Company in Home Country

Mobile Phone Abroad

Money can be saved – especially by: Export sales people, international purchasers, export drivers, international service people, site managers and expatriates etc.

Large capacity: Several mobile phones can use the call back function simultaneously.

Security: Only mobile phones registered within the company's Parlay Xtream unit can use this feature.

Parlay Xtream offers many other possibilities to optimize your company telephony – please do not hesitate to contact our sales department for further information.

Optimized business telephony with Parlay Xtream

Parlay Xtream can also optimize the company telephony in the following way:

- Automatic call forward of calls between the different telephones of the employees – such as office telephone, home phone, mobile phone etc.
- Savings as to the number of ISDN line subscriptions required
- Individual and time controlled “Calling Line Identity Presentation” for each employee
- Extension numbers for home offices
- Complete integration of a large number of home offices into the company's telephone system
- Call back from home offices (calls from home offices are charged to the company)
- Automatic and time controlled distribution of incoming calls to relevant internal and external telephones
- Automatic least cost routing among different operators
- Fully automatic least cost routing to mobile phones
- Data collection for telephone call analysis

Parlay Xtream i8 for small companies using up to 4 pcs. of ISDN BRA lines
